

Parent's Notes

Maths Week 6 – Shape

This activity can be adapted for any child. Some can just look for different named shapes when out doing their exercise and have a photo taken with the thing they find – adults can help as much as necessary so that your child can achieve. Some can use the table with some drawing it themselves while adults help others. The shapes named can be simple shapes (circle, triangle, square), the shapes could include 3D for some and more complex 2D shapes (trapezium, equilateral triangle). Don't make it too hard for your child or it won't be fun and they won't learn.

Talk to your child about what it is safe to collect and what isn't. When you get home see if your child can make some shapes with the things collected. Again some could make 3D shapes and others could use things to make simple 2D shapes.

Please try to put things onto Evidence for learning, I would love to see your child doing the activity. The instructions are on the Home Learning website for you. I hate the technology too but times are hard 😊.

I hope the weather holds for you this week. Good luck and enjoy it.
