

Planet Facts

Amazing Fact

In September 2040, five planets and the Moon will line up, meaning that you will be able to see them all in the same area of the sky.

Challenge

Planets are fascinating. Use the Internet and non-fiction books to find some interesting facts about the planets. You could draw a picture of each planet.

You could also try to find out:

- if all eight planets are ever in a line;
- what you can see through a home telescope;
- which comet takes the longest to travel around the Sun.
