

# Minibeasts

## and Their Microhabitats

A task setting PowerPoint about different minibeasts and where they live.

twinkl

## Caterpillar

Caterpillars like to live on top and underneath leaves.

This is so they can use their camouflage and blend into the leaf.

## Ant

Ants mostly live underground. They live in big families.

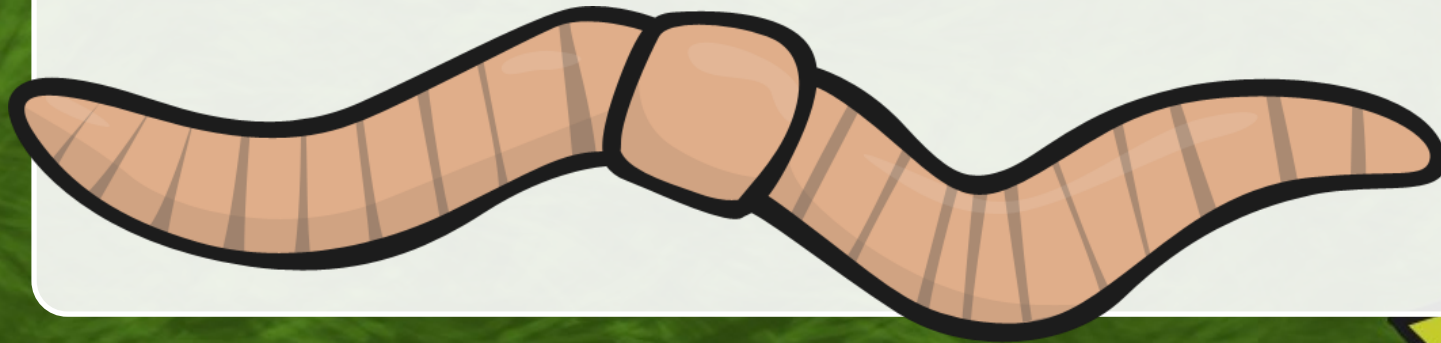

## Worm

Worms like to live anywhere there is soil.

## Spider

Spiders are able to live just about anywhere.

Spiders build webs to catch small insects to eat.

## Honey Bee

Honey Bees like to live in areas with lots of flowering plants, such as gardens and meadows.

Humans also build beehives for them to live in - usually wooden boxes.

## Snail

Snails can survive nearly everywhere and can be found all around the world.

Snails prefer to stay close to rocks and plants to hide from natural predators.

## Woodlouse

Woodlice like dark damp places to hide during the day, such as compost heaps and woodland gardens.

## Butterfly

In the UK,  
butterflies tend  
to prefer  
grasslands with  
lots of wild  
flowers.
